# 3. Tokenomics:

WhaleStreet (WST) operates on the foundation of a deflationary model, which is designed to incentivize holding and discourage excessive speculation. The key features of our tokenomics are as follows:

## 3.1. Total Supply:

The maximum supply of WhaleStreet (WST) tokens is set at 1,000,000,000. This limit ensures scarcity and provides a basis for potential future value appreciation.

## 3.2. Distribution:

The initial distribution of WhaleStreet tokens will take place through a fair and transparent launch process, utilizing a combination of presale, initial liquidity offering (ILO), and public sale events. The details of the token distribution will be shared with the community prior to each event to ensure transparency and fairness.

# 3.3. Transaction Fees:

A portion of each transaction conducted using WhaleStreet will be distributed to holders through a frictionless yield mechanism. Additionally, a percentage of transaction fees will be allocated towards community development, liquidity provision, and marketing initiatives.

## 3.4. Liquidity and Burning:

To ensure a stable and liquid market, a percentage of transaction fees will be used to provide liquidity on decentralized exchanges. Furthermore, a regular burning schedule will be implemented to reduce the token supply gradually, thereby increasing the value of the remaining tokens over time.

# 4. Community Governance:

WhaleStreet embraces the principles of decentralization and community governance.
